

## MANAGING OUR MATERIAL MATTERS

Our sustainability journey is guided by the importance of our materiality. Materiality is defined as the significant economic, environmental, and social impacts of an organisation as well as issues that substantially affect the decision making of stakeholders. Conducting a materiality assessment will enable us to identify the issues that are most significant to us, in terms of what we do, who we are and how we operate. We will use this assessment process to identify risks and opportunities for all key environmental, social and governance issues that impact our business and our stakeholders.

Our material issues are reviewed annually to ensure they reflect our strategic priorities and needs. In 2022, we conducted an internal review of our material matters and concluded that all the material matters were still relevant to our business strategy, industry peers, regulatory requirements and sustainability reporting frameworks.
